The present invention generally relates to windshield wiper systems and relates in particular to a clutch assembly for driving and drivingly connecting two wiper arms of a windshield wiper system with a wiper arm driven shaft. Conventionally, a clutch assembly of this general type is comprised of a driven shaft which, for example, is driven by an electric motor to drive the windshield wiper arm, which clutch assembly includes a driven clutch plate, a driving clutch plate, and a torque transfer mechanism positioned between the two clutch plates and adapted to transmit a drive torque from the driving clutch plate to the driven clutch plate. To ensure the drive torque is optimally transmitted from the driving clutch plate to the driven clutch plate, and to limit a drive torque and/or a bending force or moment which may be transmitted from the driving clutch plate to the driven clutch plate, the clutch plates are provided with radially outwardly extending annular retaining grooves which axially and circumferentially confine the clutch plates relative to each other, so that, even when a significant drive torque is applied to the driving clutch plate, the clutch plates are
