The present invention relates to a pair of scissors, and more particularly to a pair of scissors which has very strong resistance to the loads exerted by the user. A pair of conventional scissors is shown in FIG. 1. It comprises a pair of scissors main body 10, and a pair of handle members 11 coupled onto the bottom of the scissors main body 10. A pair of blade plates 12 are pivotally and pivotally coupled to the bottom of the scissors main body 10. Each of the blade plates 12 has a blade hole 121 defined therethrough. A pair of cutter members 13 are pivotally and pivotally coupled to the upper part of the scissors main body 10. Each of the cutter members 13 has a corresponding blade hole 131 defined therethrough, and a pair of threaded rods 132 are used to axially couple the cutter member 13 to the blade plate 12. Each of the threaded rods 132 has one end which is engaged into the corresponding blade hole 131 and the opposite end which is engaged into the corresponding blade hole 121 to axially position the blade plate 12 and the cutter member 13 relative to each other. A pair of blade covers 14 are pivotally and pivotally connected to the bottom of the cutter members 13, and a pair of adjusting screws 15 are used to couple the blade covers 14 to the cutter members 13. The adjusting screws 15 respectively have threaded portions 151 which are engaged into the threaded holes 15 formed in the corresponding blade covers 14 and the threaded rods 132, and corresponding screw nuts 152 which are engaged into the threaded rods 132 to clamp the cutter members 13 and the blade covers 14 to the cutter members 13. Each of the blade covers 14 has a corresponding blade holding piece 141 formed in the inner wall thereof, which is used to axially hold the corresponding blade 12. In the scissors, as illustrated in FIG. 2, when the user forcefully pushes the handle members 11 toward each other, the handles 11 act as levers and force the cutter members 13 downwardly to cut an object. When the user releases the 570a42141b
