+++ Today, with over a million new features and improvements released each year and over 4.5 million users, AutoCAD is by far the world's leading digital drafting software. AutoCAD has several useful drawing-related commands including line, arc, polyline, spline, and polygon editing. You can create 2D drawing objects using the Pen, Pencil, and Calligraphic tools. The Application menu contains various commands such as Measure and Design Center. Selecting the Edit toolbar drop-down shows more options and commands. A user can select a command by clicking on its drop-down menu, for example, the Boundary command in the Design Center. Another way of selecting commands is to right-click on a specific icon. The Insert command lets you add objects and edit existing objects in 2D drawings. The Unhide command lets you hide objects that were hidden before. The Intersect command lets you create a new object by intersecting two existing objects. The Extrude command lets you create new surfaces of any depth. A 3D drawing object consists of blocks (objects). Select a block by clicking on it or by using the Block Selection tool. To change the block size, select the Object Size option on the status bar or by using the Size drop-down menu. To move the block, drag it with the mouse. To rotate or change the position of a block, select it and then use the rotate tool or rotate on the Drawing toolbar. To resize a block, double-click it and use the measurement tool to adjust its size. The Undo command lets you redraw the last editing operation. The Delete command lets you remove objects. Use the Undo command to undo previous drawing operations. The Edit option on the status bar displays a shortcut key for the most commonly used commands. The Select tool on the Drawing toolbar lets you select objects and edit them. The Manipulate tool on the Drawing toolbar lets you manipulate the selected objects. The Proximity option displays the Distance tool when you hover over the drawing canvas. The Drop command lets you move objects to a new location. The Object Selection option on the status bar helps you select a group of objects. To move a group of objects, select it and drag it with the mouse. To resize it, double-click it and use the measurement tool.

LISP AutoCAD's object-oriented programming support was known as LISP prior to AutoLISP. A detailed description of the original AutoLISP is in the Autodesk Help System topic titled "Introduction to AutoLISP". (This is an older version of the language supported in the current version of AutoCAD). For a history of the language's adoption in AutoCAD, see the section History of AutoLISP. AutoLISP has many similarities with other dynamically typed languages. The most apparent similarity is a command-line interface to Autodesk's AutoCAD application. This interface is made through an interpreter called the AutoLISP Control Manager (ALCM), which executes commands when they are entered. One of the most important features of LISP is the use of the special data structure, the list, to create more complex data structures. VBA Microsoft Visual Basic for Applications (VBA) provides programmers with access to the Application programming interface (API) of Office products, including AutoCAD. AutoCAD's Visual Basic for Applications support is available to AutoLISP programmers via the LISP/VBALISP

integration. A macro, created with AutoLISP and Visual Basic, can access the native AutoCAD API to add, delete, or modify objects. AutoLISP and Visual Basic for Applications (VBALISP) programmers can communicate through the LISP / VBALISP integration. Visual Basic for Applications provides a line of programming objects including Line, Arc, Ellipse, Rectangle, Polyline, and Polygon. These objects are similar to the shape objects available in AutoCAD. These shapes can be used by AutoLISP and Visual Basic for Applications programmers to create objects. The AutoLISP and VBALISP libraries contain hundreds of these shape objects. .NET AutoCAD's native API allows development of custom code written in .NET, a managed, general-purpose language that provides a common programming language for the Windows platform. The .NET API provides features that are not available through AutoLISP. The system architecture .NET is based on is similar to that of the Common Language Runtime (CLR), and therefore .NET is also dynamically typed. These two characteristics are also shared by AutoLISP and AutoCAD. ObjectARX ObjectARX is a 5b5f913d15

Advertising Read more Washington (AFP) US President Donald Trump on Tuesday pardoned controversial former Arizona sheriff Joe Arpaio, who was found guilty in July of criminal contempt for violating a federal court order in the waning days of Barack Obama's presidency. "I am pleased to inform you that I have just granted a full Pardon to 85 year old American patriot Sheriff Joe Arpaio," the president tweeted. "He kept Arizona safe!" Arpaio, a notorious lawman who was pardoned by President Gerald Ford after he was found guilty of contempt in 1981, has been a staunch ally of Trump. In September he tweeted that he was "pleased to announce that I have signed the Presidential Pardon of the 85 year old American patriot Sheriff Joe Arpaio." Arpaio, who came under fire for his hardline stance on illegal immigration, had been accused of racially profiling Latinos and detaining people without due process. Arpaio, a former Republican, was the tough-talking former sheriff of Maricopa County in Arizona and a strong supporter of Trump. He was the first to introduce the sheriff at the Republican convention in Cleveland in 2016. The 85-year-old, nicknamed "America's Toughest Sheriff," was a vocal supporter of Trump's run to the White House and helped lead the Republican Party's efforts to win the Latino vote. He was a strong ally of Trump during the 2016 campaign and was even floated for a job in the Department of Homeland Security after the election. Arpaio was convicted in July of criminal contempt for disobeying a federal court order in a racial profiling case. It was the first conviction of a sitting US sheriff on charges of criminal contempt. The former sheriff was set to be sentenced on October 5, the eve of the Trump administration. © 2017 AFPA new application of an old drug.
