In an era where Applications are the lifeblood of any organization, Application Manager is the most trusted and most dependable application performance monitoring solution. It allows you to see the health and availability of your applications in real time. With Applications Manager, you can detect application, server, database and other operational problems before they result in business losses, downtime or human error. You can see the performance of all the critical applications and servers in your enterprise. From within Applications Manager, you can detect and view the availability and performance of the applications running on any of the Windows, Linux, Mac OS X or UNIX systems that you administer. You can also track the performance of any application on a single system, or from a group of systems that are managed by your IT department. Applications Manager delivers quick and accurate alerts when application performance drops or outages occur. You can even set alerts so Applications Manager notifies you when performance drops or outages occur. Key Features : \*

- \* Application Monitoring
- \* System Monitoring
- \* Database Monitoring
- \* Security Monitoring
- \* Performance Monitoring
- \* Availability Monitoring
- \* Monitoring of custom applications
- \* Monitoring of services
- \* Built in SNMP

Empower SQL Server DBA's to make more informed decisions on day to day basis, with the right set of tools SQL Server DBA Toolkit gives you a wide spectrum of functions to get insights into the SQL Server environment, monitor the performance of the SQL Server, and make informed decisions on day-to-day basis. You can monitor the performance of SQL Server and applications using SQL Server Agent job schedule and performance monitor. It also provides a set of functions to analyze data and make informed decisions on day-to-day basis. With SQL Server DBA Toolkit you can do the following :

- \* Monitor SQL Server performance and alert on potential issues
- \* Take back up of the SQL Server Database
- \* Perform SQL Server backup
- \* Monitor SQL Server Agent job scheduling
- \* Monitor SQL Server's login and logout performance
- \* Make backups of SQL Server Databases
- \* Create & monitor Alerts
- \* Monitor the performance of SQL Server
- \* Monitor SQL Server Read and Write Operations
- \* Monitor SQL Server's Cluster

This is a toolkit developed by Quest and this can be called to track usage of your SQL Server resources on a daily basis or per hour. It gives you a set of time-based and SQL Server based alerts, which help you make informed decisions to resolve the issues.
