A: Assuming you are using Ubuntu. As of today, python3 -m pip install --upgrade django will work. python3 -m pip install -U django Resolves python3 virtual environment issue A: Using pip for the installation of a newer version of django requires a corresponding update of pip, so this command updates the version of pip in your python environment, which you can use to install the newer version of django. After updating the pip, you can use python -m pip install -U django to update django in your environment. Note that there is a note at the bottom of the pip documentation which advises to do this with sudo python -m pip install -U django, to make sure that the environment variables are already updated. 3e33713323
