Polymorphism within coding sequences of housekeeping genes provides insights into processes of sequence evolution and can be used to infer the evolutionary history of populations. Here, we report the initial findings of a detailed molecular evolutionary analysis of a highly polymorphic heat-shock gene, hsp70, in malaria vector *Anopheles gambiae*. Of the several nucleotide and amino acid polymorphisms detected, two were selected for further study: one is the result of a single point mutation at position 24 (C-->T), and the other is the result of a length polymorphism at position 177. The evolutionary history of the hsp70 gene in *A. gambiae* was inferred using maximum likelihood and two parsimony methods. The results suggest that multiple gene duplications and losses have occurred within the *A. gambiae* species complex, and that subsequent gene duplications have been subject to biased selection leading to non

#### What's New In Enpass Portable?

Keep your passwords, finances, and personal data safely stored in one place, and have them with you anywhere you go with this cross-platform password manager. What's New: Fixes an issue that was causing a crash when launching from newly installed version. Application Description: iPhones are without doubt the most popular smartphones in the world. In fact, in 2014 iPhones outsold all other smartphones and tablets combined. And they are far from the only devices that are embraced by Apple fans; the company's other well-known line of products, the iPod and iPad, also sell in large numbers. The question that follows is why people buy Apple's products, which can be expensive, and what makes them so special. Apart from a great design and extensive app store, the main reason for Apple's success is the company's close relationship with its customers. All products released by the company are designed with the customers in mind. According to Tim Cook, Apple's CEO, "We focus on the customer. It's how we make and sell our products. Our customers are the most important metric we use." This focus is so great that the company gets to know every aspect of how people use its products, and no matter how trivial or seemingly inane, the company thinks about it first. According to its website, "Apple has always created products that are more than the sum of their parts." This means that while other companies often release products that have a few innovative features, Apple focuses on creating products that are perfect for people's daily lives, and also the most powerful and easy to use. It is this philosophy that makes Apple's products so attractive. And it's this same philosophy that goes into all of Apple's products, from the iPhone to the Mac. While other companies like to make heavy use of advertising, Apple often prefers not to spend much on marketing. However, this doesn't mean that people don't have a wide array of great devices to choose from. Each of Apple's products is designed to take the best of what other companies have done and polish it up. This means that if you are looking for an iPhone, you need to choose the best one from the existing line. It's important to choose the model that best meets your needs. iPhone screens vary in size, depending on whether you want a 4-inch screen or a 4.7-inch screen, and the screen resolution, which is different for each size. For a full range of sizes and resolutions, you will have to choose between an iPhone 4 and an iPhone 5. The larger screen on an

iPhone 5 allows you to use it for a lot more, including games, which would be difficult to play on an iPhone 4.
