What's New in the AutoCAD?

With Automatic Change Detection, you can track changes as they occur and help make the most of design improvements. "Is there anything in my drawing?" A Smart Markup Assistant helps you search your drawing for artifacts as you work. In just a few seconds, the Smart Markup Assistant automatically opens, searching for blocks, annotations, text, graphics, and other items in your drawing. Reduce overall time spent on drawing tasks with the new Markup Map feature. The Markup Map displays the items in your drawing, including the blocks, annotations, shapes, text, and graphics. You can quickly see the features that are in your drawing and make needed changes. The Map's features also can be searched and updated to locate a specific drawing element. PDF and Ink Technologies Ink now automatically detects when you're using an ink-enabled printer. If your printer does not support the ink, AutoCAD displays the warning message and stops the printing. To help users who want to continue working with a non-ink-enabled printer, AutoCAD can take multiple scan impressions from one image and combine the images into a new, non-ink-enabled file. When using the scanner on a non-ink-enabled printer, AutoCAD now automatically configures the ink model to work with the printer. Formats now support up to 32,000 colors. AutoCAD no longer limits your maximum color palette to 2,048 colors. Drawing Scanning The new Automatic Document Handling feature enables AutoCAD to more effectively and accurately scan drawings with the built-in scanner, making it easier to scan two or more drawings in one session. When you run a batch of drawings on a scan, the system can automatically determine whether all the drawings are correct and automatically create a correct merge drawing. If a drawing has some errors, the system identifies the drawings that have errors, shows the range of the errors, and reports the associated problems. In addition, the system tracks all the changes as they are made to the drawings. Support for faster scan transfer speeds and the automatic conversion of Microsoft Publisher files to a format compatible with AutoCAD New Layers and Transparency Capabilities The new Layers feature in AutoCAD, enables you to define your own layers and treat them like any other object in your drawing. You can assign layers to items in your drawing
