What's New In?

Guidelines for creating animated books, movies, or other media are different from the standard guidelines of comic books. When creating any kind of media, you want to be sure that you are presenting the ideas that you want to express in the best possible way. As the first step, you should design a storyboard which will lay the foundation for your ideas. Designing a storyboard is similar to writing a story, but with a more restricted vocabulary. You are able to describe the whole story in a few sketches, and then you can add more details in the form of illustrations, animation, and text. Storyboarding your own ideas is the best way to create something unique and original. But how do you start creating a storyboard?

Essential Steps for Creating a Storyboard

Step 1. Define the Story The first step is to know what it is that you want to show. Your audience should know what the story is about. What is the message that you want to deliver? It can be a short story, a long animated movie, an opening of a web site, a commercial, or a video. This short description of what your story is about is your initial concept.

Step 2. Sketch a Short Version Now that you know what your story is about, the next step is to sketch a short version of it. It is important to sketch the storyboard as fast as possible, as only the sketches contain the information that you need to convey your

idea. Do not wait for every detail to be perfect. Try to find a quick way to convey the whole idea of your story to your audience. Step 3. Add Characters The characters have a lot to do with the story. Characters can act, speak, or even react to something that is happening in the story. In other words, they have to deliver a message to your audience. They can also be involved in a dialog with other characters. If you want to add more characters to your story, then you can add background characters and props. Even if it is your own story, your audience should know who the characters are and what their personal qualities are. For example, it is important to show that a character is tough, is a joker, or is a shy person. Step 4. Add Details After you have sketched the initial idea for your story, it is time to add some details and fill the gaps. Every piece of information is an element that represents a character, an environment, or an object in the story. For example, the details of a character can be the clothes he is wearing or the hat that he is holding. The details of an environment can be the colors, the furniture, the background, or the number of people that are present. In case you are sketching the opening of a story, you can add a title to the beginning. Step 5. Add Details, and Make It
