History AutoCAD was originally developed by Corel and is not related to the Autodesk software or the AutoCAD Civil 3D software. The first version of AutoCAD was not released as a desktop app, but as a more traditional time-share client application. This is probably why the first versions were referred to as "AutoCAD/TurboCAD" since AutoCAD had TurboCAD. Corel released the first version of AutoCAD in November 1983. By 1985, the price of the time-share version of AutoCAD was rising at an annual rate of 25%, and was costing \$300 a day for the average user. During the late 1980s, IBM Computer Corporation was working on an enhanced operating system called OS/2. Rather than porting AutoCAD, IBM instead released their own software product called MicroStation, which integrated CAD and engineering data. AutoCAD eventually released as a stand-alone product in 1993. When first released, AutoCAD had a steep learning curve. When the first version of AutoCAD was released, it could only read data from other applications that had also been created in AutoCAD format. Early applications included National Center for Geographic Information - Geospatial Information Standards, AutoCAD Graphie (French for "Graphics"), and MS-DRAW. AutoCAD was originally created for use in architectural design.

Initially, most AutoCAD users were architects, engineers, and other designers. As CAD became more widely used in other industries, the user base expanded. An add-on package called DraftSight was introduced in 1985. One of the many functions of DraftSight was that it allowed a user to connect directly to the Geodatabase database without having to export the data into a separate file. The data could be inserted directly into AutoCAD. AutoCAD History AutoCAD 1998 First release of AutoCAD 2002 Version 11 and later is one of the first Cad programs to take advantage of 64-bit memory addressing. AutoCAD 2000 Version 2000 brings architectural capabilities to the next level. Also introduces the Dynamic Component Instancing feature to the cad programs. AutoCAD X AutoCAD X is a commercial version of AutoCAD that is available for both Macintosh and Windows platforms. It has been available since the introduction of AutoCAD X. It is

The vista-autocad.dll, which is part of AutoCAD v2011, can be used to import DWG files into AutoCAD. Since version 2008, AutoCAD contains APIs for communicating with Apple iOS devices. It can both import and export drawing information to the iOS version of AutoCAD. Since AutoCAD 2016, it can also import and export to Microsoft Windows and Android. AutoCAD also has several web-based drawing software. As of version 2012,

AutoCAD contains a scripting language, AutoLISP, which can be accessed using the AutoLISP Editor. Visual LISP is a programming language developed by NavisWorks, which is the same as LISP. One of the features of Visual LISP is that it is interpreted. This means that the lines of code are not compiled into a program file, rather the code is "interpreted" and executes as a script. Visual LISP has been the only scripting language used in AutoCAD until version 2014, where it was replaced by the Visual Basic for Application (VBA). AutoCAD script language AutoCAD script language, also called autoLISP, is an interpreter of the language developed by NavisWorks. It is a dialect of the LISP programming language and is completely different from the Visual LISP that is a compiled interpreted language. The AutoLISP Editor is a dialog which includes many features for managing AutoLISP scripts. The scripting language is capable of being used to automate the drawing process, to perform many other functions, and to perform tasks in the same way that Visual Basic for Applications, Visual LISP, Visual Scripting and other programming languages do. One of the key differences is that AutoLISP is a text-based programming language and not a graphical programming language. Because of this, it is more suited to AutoCAD's users who are not professional programmers. AutoLISP scripts can be included in the ActiveX Object of AutoCAD which is much like VBA. AutoLISP is used in the more advanced versions of AutoCAD and is also very useful to all users of AutoCAD. Many users prefer the AutoLISP language to the Visual LISP language, because it is much easier to work with for those who are not professional programmers.
