----- If you are new to OpenNI, I think it's worthwhile to have a look at OpenNI core, NITE and NDK. OpenNI core is the heart of OpenNI. It contains all the device models for OpenNI 1.0. For example, a "Point" contains a timestamp, a position and a confidence. OpenNI NDK enables you to access OpenNI core from your C or C++ application. You need it, if you are interested in running OpenNI code in your C application (such as a camera capture program). You don't need it, if you are not interested in developing OpenNI applications, but just want to access the supported functionality of OpenNI. The SimpleOpenNI project is a fork of the OpenNI project on Google code. The goal of this project is not only to support the latest NITE version of OpenNI, but to also add some new functionalities.

SimpleOpenNI provides four ways to access the functionality of OpenNI: 1.

SimpleOpenNI.openNI 2. SimpleOpenNI.nite 3. SimpleOpenNI.NVM 4. SimpleOpenNI.JNI The first two are designed for simple applications, the other two can be used if you want to develop OpenNI based applications. Getting Started ----- 1. Download the SimpleOpenNI from or 2. Download the latest code from Once downloaded, unzip it in a directory. For example: unzip SimpleOpenNI-0.3.zip 3. Install JDK 1.7 or higher. 4. Set the environment variable "JAVA_HOME" to the directory of the JDK 5. Set the environment variable "LD_LIBRARY_PATH" to point to the directory where the OpenNI and NITE libraries are located 6. Run "java -version" to ensure that the JDK is installed correctly. The next step is to compile SimpleOpenNI. 1. From the directory where SimpleOpenNI is downloaded, go to the directory where you unzipped the SimpleOpenNI. 2. From the directory where you unzipped SimpleOpenNI, run "ant" to build the project. 3. Compile and run SimpleOpenNI. 4. To build Simple

SimpleOpenNI allows you to access OpenNI/NITE features through a simple easy to use API and provides the same level of functionality as a full fledged, commercially available SDK like Devialet. For more information on the SDK, please visit The code was adapted from VexFinger. Note that I had some problems using SimpleOpenNI 1.4.4 with Nexus 7 (2) Finally I had to get

the last version of SimpleOpenNI and I get now a perfect finger tracking. You can also try the OpenNI sample, which is a Pong game based on OpenNI 11/22/2014 The default SimpleOpenNI sample code provided by the openni-android-sdk is based on the NITE sample that uses the original openni-libraries and is no longer able to run on the Nexus 6. This will be addressed in the next update of the SDK I've created a branch of the openni-android-sdk. I've created some functions to make it easier to use. So the two new functions are `getDevice()` that returns the last available device that is installed on your android device and that has openni-libraries installed. `init()` that is automatically called when you run the sample code. This functions should now be integrated in the official sample code in the next update of the sample code. 11/20/2014 Some days ago I've noticed that the libraries provided in the openni-android-sdk were no longer compatible with the API 17. So I've created a branch for the SDK that provide the last version of the libraries with support for API 17. This version of the SDK will be included in the next update of the SDK. 11/16/2014 I've recently discovered that the SimpleOpenNI sample was not working correctly on the Nexus 7 (2). I've now integrated the openni-libraries version 2.1.0. Note that you should have a previous version of the libraries than 2.0.1 because the functions provided by SimpleOpenNI has been updated. So if you have a Nexus 7 (2) you should update your openni-libraries to the last version with the patch release of the sample. 11/08/2014 I've 1d6a3396d6

SimpleOpenNI For Windows [Latest-2022]

This library is a simple wrapper of the OpenNI and NITE-SDK and provides a C-API to access the functionality of these libraries. You will need to download the OpenNI and NITE-SDK from the [openni website]([https://www.openni.org](#)) and install it. The OpenNI and NITE-SDK can be installed in this way: git clone cd OpenNI ./setup.sh cd NITE sudo./setup.sh For other versions, refer to the [README.md]([https://github.com/MBatKolowicz/SimpleOpenNI/blob/main/README.md](#)). **Note:** This project is maintained by the community and I do not officially work for Microsoft, so not all functions are guaranteed to be supported and even if they are, I can not guarantee that I will fix bugs. Please report them via GitHub Issues or contact me at @MBatKolowicz on Twitter.
