The Attachments extension is made to automatically move or copy attachments to different locations. Introduction The Attachments plugin (version 3.0) is made to automatically move or copy attachments to different locations. It can be used to send attachment in other Thunderbird users mailboxes (if you sent them the attachment), or to move or copy attachments from one place to another on your computer. As the plugin has to access file permissions directly, it will only be enabled to work when Thunderbird is running on the same computer where the files are located.

Attachments just don't cut it anymore. □ There are all kinds of attachments. From graphics to media, you need to handle all these attachments effectively. □ Your time is precious. You don't want to deal with dozens of email attachments. □ E-mail is imprecise. In most cases, the information you receive in your email is just a fragment of what you want. Even when the mail client does offer you the ability to mark messages as read, it is usually impossible to really unread them. □ We live in the information age, and information means attachments. Lots of them. A lot of attachments on a single email can become a nightmare in even a light-loaded environment. □ Attachments take up valuable space on your hard disk. To avoid data loss or corruption, we must find a way to handle all the attachments we receive without occupying disk space. But, how do we do that? □ Saving attachments in your hard disk is easy. But attaching to a file with a name only is not the most convenient thing. Most mailers could be smarter. But, most mailers don't know how to do that either. □ Email attachments are a pain. Even the most capable email clients can't handle them. If you've ever tried to import a huge attachment into a CuteXPS viewer, you'll know what we're talking about. □ Attachments are no longer delivered as an attachment in the email; they are delivered as a content file. That is, you can't open it like any other content file: it's just, it's a way to handle data in the email. So why not have
