Masipa Search Advisory Body: The Panel of Commissioners, set up by the Minister of Justice pursuant to Article 122(3) of the Constitution of the Republic of South Africa (Act 56 of 1997), to advise the Minister of Justice on the benefits to be derived from the dissolution and liquidation of the former jurisdiction of the Pretoria Regional Court in view of the establishment of a single Supreme Court of Appeal for the five provinces of the Republic. Notes: The establishment of the Supreme Court of Appeal for the provinces of the Republic has resulted in the dismantling of the Pretoria Regional Court, which has therefore been dissolved.The maximum number of days between the end of an Indian Premier League season and the start of a Test series is apparently 30. Should the format of England's summer tour to India be changed to the traditional five-Test series? If India play five Tests against England in India next year, they will be playing in 36 cricket matches next year. If they play that many matches during a full Australian or West Indian tour, surely that would be overwhelming? Should India be allowed to rest their squad just because it is an English summer and that they have been playing cricket since December? READ: Why India-England is a 'tale of two cities'? We don't know what the format of this summer's tour will be but, on the face of it, there is more cricket than many other nations. Alastair Cook's decision to play a four-match Twenty20 series against India backfired when the All-England Club initially attempted to field an XI that was not fully fit. In the end the England team was too tired to win. The International Cricket Council's rules state that Test and ODI cricket can be interrupted for a bilateral series, but there is no provision for players to be rested. "If you were (to ask)," Australian coach Darren Lehmann said, "we'd have to look at that again." In previous years, England and Australia have played five Tests a year in the summer because the tours don't interrupt the Test window. Next summer could be different though. But Michael Vaughan, the former England captain, believes there are no grounds for change. "You're always going to be adapting," Vaughan said. "I think the way we've chosen

What's New In?

The present invention relates to a disk storage device provided with a magnetic recording medium, a magnet head for recording/reproducing data on the disk by means of a magnetic field, a carriage moving the magnet head along the radius direction of the recording medium at a high speed, and a beam light beam for reading out data recorded on the recording medium. A typical conventional disk device is illustrated in FIG. 10. In FIG. 10, reference numeral 11 represents a carriage which is movable in the radial direction of a magnetic recording medium 10. The carriage 11 is mounted on an axle 12 and driven by a ball screw mechanism 13. On the carriage 11 is mounted a magnet head 14 for recording and reproducing data. The carriage 11 is made of aluminum and is brought into contact with the recording medium 10 by an appropriate contact mechanism to scan the same. The magnet head 14 is provided with a S-pole 14a and an N-pole 14b which are oppositely arranged in the width direction of the recording medium 10 and which form a number of magnetic domains (one domain is referred to as "bit" hereinafter) in a unit area of the recording medium 10. The magnet head 14 has a dual type recording/reproducing head in which the output of the head for recording and reproducing, and the output of the head for reproducing only are shared respectively. Therefore, the magnet head 14 is sometimes called a dual recording/reproducing head. This head can change the polarity of recording bit, and is called a reversible recording head. The recording medium 10 is rotated at a constant velocity by a spindle motor 15. An optical system 16 is used to guide a laser beam along a track formed on the recording medium 10 by the magnet head 14 and read out the data recorded on the track of the recording medium 10. A linear tracking actuator 17 controls the movement of the carriage 11 in the radial direction of the recording medium 10 and is moved on the carriage 11 by a beam actuator 18. The beam actuator 18 can finely move the beam relative to the recording medium 10. The schematic construction of the above mentioned conventional disk device will be described in detail. Reference numeral 20 represents a chassis on which the spindle motor 15 and the carriage 11 are mounted. The chassis 20 is fixedly mounted on a base plate 25. The spindle motor 15 and the magnet head 14 are installed on the carriage 11. The recording medium 10 is mounted on the carriage 11. The recording medium 10 is supported on a
