Download Snipping and Screen Recording tool with Portable version: Digital photography enthusiasts often use a Snipping Tool to take screenshots, and they might eventually want to make videos, too. There are many different Snipping Tools out there, but only a few allow you to do things like annotate the screenshot with different shapes and colors. iScreenKit is a powerful and easy to use Snipping and Screen Recording Tool that gives you the option to merge several screenshots into a single image. More specifically, it's a feature-rich Snipping Tool that lets you merge several screenshots into one image, as well as watermark it with the text you want. It has a simple and easy to navigate GUI that doesn't take up much of your time. Snipping tool and screen recorder in one package This particular application acts as both a snapshot tool and a screen recorder. It can be

used for capturing screenshots and creating video tutorials with various annotations to the output. It features three major modules: one for capturing screenshots, one for recording screen activity and the last for capturing scrolling screenshots of webpages, long spreadsheets or documents. This latter feature is one of the features that makes iScreenKit really stand out among its competitors. Take snapshots and add them annotations To take a screenshot, you can either press the “Capture” button or use the associated hotkey. iScreenKit enables you to manually select the area to capture,

## **iScreenKit (Updated 2022)**

The absence of options to capture the entire screen, to select parts of the window and to add watermarks, is the downside of the app. Otherwise, it comes with numerous options to customize the snipping tool and the video recording. As a result, iScreenKit should fit its purpose of capturing and editing screenshots and video recordings, without missing out on options. Therefore, we rate it with 4.5 out of 5. The drawback of this snipping tool is that it is not free and it has a limit of capturing only 30 images per day. Compatible Software: Microsoft Windows 10 Microsoft Windows 7 Microsoft Windows 8/8.1/10 Microsoft Windows Vista Microsoft Windows XP Input Devices: No Cameras: No iScreenKit snipping and recording Let's face it: iScreenKit is a snipping tool and a screen recorder. Even though it has two different software titles, they are bundled together in one single interface. The application allows you to capture the whole screen as well as select individual areas and to add graphics to the resulting picture. In addition to this, you can record the screen activity, which includes the mouse movements, while letting you either copy or share the recording directly from within the app. Screenshot and recording functions covered The most interesting features of iScreenKit are those related to the recording part. You can record up to 30 screenshots at a time using the application without the need to be connected to the internet. The screenshot function is available to save whatever you can capture on your computer screen. Be it a window, a region or the whole screen, you can pick any area and click on “Record” to start the process. Of course, you can also click on the “Home” button to have the tool save the image to your Documents folder. Finally, you can record a video of any length using your webcam as well as the microphone. Where the app stops is with the file format of the screenshots and the videos. The records are saved as MP4 files, which is no problem at all. However, the output file types do not have any particular extensions. That is, you are not able to save the screenshots as JPEG or PNG files to share them. You can only save them as MP4 files, which is the format on which they were recorded. User interface and appearance The user interface of the app is not overloaded with unnecessary options. The snipping tool is placed

windows, regions or the whole screen. • It has no option to add graphic or text watermarks. • It does not work in all desktop environments. • It does not support capturing the whole system sound (only the mic and the webcam audio)

WebCapture allows you to capture any web page, that's exactly what it was designed for. Let's say that you want to record the product of a web page but you are far from the place where the page is, or you just want to capture the link to an image, whatever it may be, WebCapture is the tool that you are looking for. It is a fast and easy solution to solve all your online issues.

**Screenshots** You can take a screenshot of any HTML or image with the use of the WebCapture button or the associated keyboard shortcuts. You can capture any element that is displayed in the browser, including the whole page or a single HTML element. You can also use WebCapture to capture the link to an image.

**Record** With the recording feature, you can choose to record a single page or web application, and save the resulting video as an MP4 file or as a part of a recording playlist, with or without watermark. Alternatively, you can record your screen. This feature is very easy to use, the user interface just requires a single mouse click to start recording. You can choose between several options to customize the recorded area and the aspect ratio.

**Customization** WebCapture supports lots of options to customize the capture. You can choose the direction (horizontal or vertical), the width and the height of the recording area, the format, watermark, playback speed, and much more.

**Capture** This option allows you to take a screenshot of the page, or web application at a defined time. This might be useful if you want to capture the entire page, but you
